

*Aligning business priorities with project priorities raises the strategic involvement of IT in the organization. Project Portfolio Management minimizes financial risk, streamlines business processes and helps make a more balanced mix of strategic project investment decisions. Successful IT governance provides constant monitoring to assess which projects are on track, which need help and which should be shut down, and comprehensive view on the IT assets and their utilization.*

## 24x7 ESI Solution

For many years, 24x7 ESI has been assisting Fortune 500 companies in project and program management activities. Based on this rich operational experience, we offer clients both technical solution and set of services to quickly implement efficient Project Portfolio Management infrastructure.

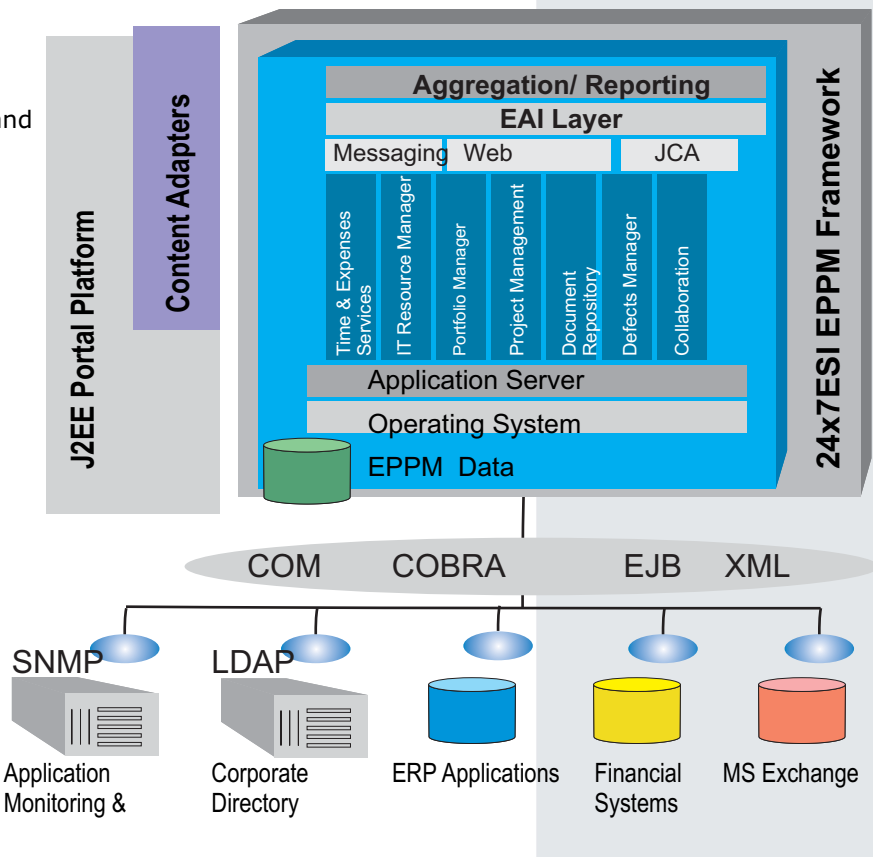

24x7 ESI builds an effective collaborative solution to support project portfolio management that suits your needs. Our solution, based on Internet technologies, can be accessed a secured way and via a browser. The solution comprising of third party components and 24x7 ESI EPPM framework, integrates both document management and workflow facilities. Our EPPM Solution is a platform for CIOs and other Senior IT managers to manage their entire IT organizations priorities and meet their organizations IT governance and compliance requirements.

### 24x7 ESI follows a four step process for IT organization overhaul:

- Organize
- Get objective data
- Align people, projects, processes, and priorities
- Monitor & manage continuous Improvement

### The Technology solution addresses

- Project prioritization and weighting
- Smart resource allocation
- Revenue, scope, cost analysis, allocation and management
- Integrating project risk assessment with portfolio level risk assessment
- Automated IT processes
- Portfolio decision making and managing ongoing challenges
