

Clinical Trials Management System (ez-CTMS) integrated with Electronic Data Capture (ez-EDC) and Electronic Source Document (ez-SDx) systems, developed by Alpha Clinical Systems in collaboration with a USA based CRO, helps in streamlining the Clinical Data Collection and in effectively managing the Clinical Trial processes

Key Features:

- Fully streamlined workflow for creating study protocols
- ez-CTMS can accommodate clinical study designs of various sizes and levels of intricacy
- Creates Budgets for both Monitoring Level and Site Level costs, providing multiple versions of budgets till approval
- Visit Plan Wizard to create complex Visit Plans (Study Calendar) within minutes
- Integrated Financial Module for raising invoices and reconciliation of payables and receivables
- Creation of Financial Milestones for the system to take care of raising invoices on due dates
- Query Manager for effective communication between Site Staff and Monitors
- Customized event-driven notifications and alerts
- Custom reporting capabilities
- ODM Export capabilities as per CDISC standards
- Intuitive, workflow-based interface designed to maximize user efficiency
- Monitoring module allows the Project Manager to track the study progress at study, site and subject levels

Integration with ez-EDC & ez-SDx:

Our ez-CTMS integrates with our ez-EDC and ez-SDx seamlessly providing a complete suite of Clinical Trial Management System. All users of the Study Protocol can access the data across systems securely and efficiently avoiding other modes of communication thus reducing operational costs and expediting the time to market.
